

Critical Thinking

The UniLOA's authors consider critical thinking to be an active process where students use skills of evaluating, analyzing, assessing, interpreting, questioning and restating a problem or challenge. Effective problem-solving is bolstered by the individual's skill in applying critical thinking skills to their academic lives and their lived experience.

A skilled critical thinker should be able to examine and understand the fundamental qualities of problems, collect and analyze critical data, draw appropriate interpretations and conclusions, examine broad-based problem-solving options and effectively communicate and implement appropriate solutions.
